Product Overview

Lincoln WealthAccumulate® IUL (2019) provides the opportunity to have the policy value allocated between Indexed Accounts and a Fixed Account. The Indexed Accounts are eligible for Indexed Interest which is non-guaranteed interest based on fluctuation in the S&P 500 Index that may be credited to the Indexed Accounts at the end of each segment year. This policy allows flexible premium payments to the insured's attained age 121.

If the policy is still in force at the insured's attained age 121, no further premiums may be paid and monthly deductions will cease. If there is a loan, loan interest will continue to accrue. All Indexed Account values will be added to the Fixed Account as each Index Segment matures. The Death Benefit Option will be set to Level, and the Death Benefit will be paid upon death of the insured.

The S&P 500 Index is a product of S&P Dow Jones Indices LLC, a division of S&P Global, or its affiliates ("SPDJI"), and has been licensed for use by The Lincoln National Life Insurance Company. Standard & Poor's® and S&P® are registered trademarks of Standard & Poor's Financial Services LLC, a division of S&P Global ("S&P"); Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones"). The Lincoln National Life Insurance Company's product is not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, S&P, their respective affiliates, and none of such parties make any representation regarding the advisability of investing in such product nor do they have any liability for any errors, omissions, or interruptions of the S&P 500 Index.

The S&P 500 Index is a price index and does not reflect dividends paid on the underlying stock. It is not possible to invest directly in an index.

Please refer to your policy or additional marketing material for more detailed information on your Indexed Accounts.

Non-Guaranteed Elements

The policy contains Non-Guaranteed Elements (NGEs) and Indexed Account Non-Guaranteed Elements (Indexed Account NGEs). NGEs include Cost of Insurance Rate, Premium Load, interest rate credited to the Fixed Account, interest rate credited to the Holding Account, interest rate credited to the Dollar Cost Averaging Account, and the Account Value Enhancement Rate. See the Indexed Account section for a list of the Indexed Account NGEs applicable to each Indexed Account Option.

We may make changes to each of these NGEs and Indexed Account NGEs as described in the policy. Such changes can be made in consideration of one or more of the items listed in the policy. A change to one or more of these NGEs and Indexed Account NGEs can affect your policy's performance, including coverage duration, premiums required to keep your policy in force and surrender value.

Many aspects of your life insurance policy are guaranteed, including your minimum credited interest and maximum cost of insurance charges. However, the interest rate credited may exceed the guaranteed rate and monthly charges may be less than the maximum guaranteed charges. The current values columns provide snapshots of your policy assuming different crediting rates and charges than those that are guaranteed. Since these elements are not guaranteed, the values shown are just one range of possible results.

The actual values may be less or more favorable than these illustrated results. You should periodically request an updated inforce illustration to review the status of your policy values and guarantees.

This illustration shows how the policy could perform based on certain stated assumptions regarding rate(s) at which interest is credited, premium and account allocation percentages, and policy charges.

Initial Coverage Information

Underwriting Class: Female, Preferred Non-Tobacco

This illustration assumes an initial underwriting class as shown above. The actual underwriting class will be assigned after the underwriting process is complete. Should the actual underwriting class differ from what is assumed in this illustration, including future changes, the premiums and/or values should vary from those contained herein, and a revised illustration will be prepared.

Initial Death Benefit: \$24,000,000

Initial Death Benefit Option: Increasing by Cash Value

The specified amount and death benefit option assumed at issue are shown above. **Please see the Transaction Summary for any illustrated future specified amount or death benefit option changes. Increases in specified amount and some option changes will be subject to underwriting approval. All changes will require a signed request from the Owner.** Death benefits shown in this illustration are net of loan.

Premiums

Premium Timing

We do not credit premiums until received. **Please review the Transaction Summary for the timing of premiums used to create this illustration.** If premiums are not received as assumed in this illustration, this will impact cash surrender values. The Transaction Summary will show assumptions made that impact timing of premiums such as premium mode (including changes), different sources of funds, and backdating.

These assumptions are illustrative only and actual policy performance will vary to the extent these assumptions are met. Actual results may be more or less favorable than those shown.

Premium Outlay

You may vary the amount and timing of your planned premium provided the premium outlay is within guidelines set by the Internal Revenue Service (IRS). Please be aware that the timing of premium payments is critical to calculating and monitoring the policy's compliance with IRS guidelines. Premium limits and requirements may change after issue if unscheduled changes are made or if planned changes are made at different times than originally assumed. **Please be aware that changes to premium mode, even if shown in this illustration, do not happen automatically and must be requested by the Owner.** Please also note that changing to a more frequent mode (such as Quarterly to Monthly) will cause an increase in the annualized premium requirement in order to provide the same results. Any modal changes should be verified by requesting an inforce illustration.

Minimum No-Lapse Premium

Monthly Minimum Premium Amount: \$22,106.00

This policy offers a minimum no-lapse premium (NLP). If during the first ten policy years, the surrender value is not sufficient to cover the monthly deduction, the policy will continue in force as long as the cumulative minimum premium requirement has been met. To meet this requirement the cumulative premiums paid must be at least as great as the cumulative minimum no lapse premium due. The cumulative premium paid is the sum of all premiums paid since issue, less any debt and partial surrenders. The cumulative no lapse premium due is the monthly no lapse premium times the number of completed policy months.

Summary of Accounts

Lincoln WealthAccumulate® IUL (2019) provides several account options that are part of the policy value:

Indexed Accounts

Indexed Accounts contain Indexed Account Non-Guaranteed Elements (Indexed Account NGEs). We may make changes to each of these Indexed Account NGEs as described in the policy. See each Indexed Account Option below for a list of applicable Indexed Account NGEs. Indexed Accounts are eligible for non-guaranteed indexed interest which is linked to the percentage change in the S&P 500 Index value for the segment year, also known as 1 Year Point to Point (PTP). The Segment Date is the date a segment was created. The Segment Maturity Date is the date a segment ends (matures) after 12 months and is the date on which interest is credited. Each Indexed Account determines the crediting rate using an index growth cap (cap), guaranteed 100% participation rate and a guaranteed minimum interest rate (floor). The cap varies by account, and is declared for each segment at the beginning of the segment year, and once declared will not change. Caps for subsequent segment years may differ, but will never be less than the guaranteed minimum rate. The guaranteed floor varies by account. There are also additional interest bonuses that vary by account and are described in the Interest Bonuses section of this illustration. See the Interest Accumulation Detail Report for more information.

Cap Reduction Protection

If the current cap on any indexed account is reduced to 6% or lower, the policy owner can fully surrender their policy with no surrender charges.

The Indexed Account Options are summarized below. See each Indexed Account Overview section for more information.

Perform Plus Indexed Account: Earns the full PTP percentage increase of the S&P 500 Index up to an index growth cap declared at the beginning of the segment year, plus an Index Credit Enhancement (ICE). The current ICE is 56.00% but will never be less than 56.00%. Beginning in year 2, if applicable, a Positive Performance Credit (PPC) is added to the Index Credit Enhancement at segment maturity. The PPC is a non-guaranteed bonus. There is a one-time Asset Based Charge deducted when each 12-month segment is created. The current Asset Based Charge is 6.00% but will never exceed 6.00%. The cap currently declared by the Company is 9.00%, but will never be less than 1.00%. The guaranteed floor is 0%. This Indexed Account contains the following Indexed Account NGEs: Index Credit Enhancement, Positive Performance Credit, Positive Performance Range, Asset Based Charge and Index Growth Cap.

Understanding Your Inforce Illustration

For: DINA FALMAGNE
Age: 57
Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit:	\$24,000,000
Initial Death Benefit Opt:	Increasing by Cash Value
Initial Payment Mode:	Annual
Riders:	ABR

Perform Indexed Account: Earns the full PTP percentage increase of the S&P 500 Index up to an index growth cap declared at the beginning of the segment year, plus an Index Credit Enhancement (ICE). The current ICE is 56.00% but will never be less than 56.00%. Beginning in year 2, if applicable, a Positive Performance Credit (PPC) is added to the Index Credit Enhancement at segment maturity. The PPC is a non-guaranteed bonus. There is a one-time Asset Based Charge deducted when each 12-month segment is created. The current Asset Based Charge is 4.00% but will never exceed 4.00%. The cap currently declared by the Company is 7.25%, but will never be less than 1.00%. The guaranteed floor is 0%. This Indexed Account contains the following Indexed Account NGEs: Index Credit Enhancement, Positive Performance Credit, Positive Performance Range, Asset Based Charge and Index Growth Cap.

Balance Indexed Account: Earns the full PTP percentage increase of the S&P 500 Index up to an index growth cap declared at the beginning of the segment year, plus an Index Credit Enhancement (ICE). The current ICE is 55.00% but will never be less than 55.00%. There is a one-time Asset Based Charge deducted when each 12-month segment is created. The current Asset Based Charge is 2.00% but will never exceed 2.00%. The cap currently declared by the Company is 6.75%, but will never be less than 1.00%. The guaranteed floor is 0%. This Indexed Account contains the following Indexed Account NGEs: Index Credit Enhancement, Asset Based Charge and Index Growth Cap.

Conserve Indexed Account: Earns the full PTP percentage increase of the S&P 500 Index up to an index growth cap declared at the beginning of the segment year, plus an Account Value Enhancement (AVE). The current AVE is 0.35% but will never be less than 0.35%. The Index growth cap currently declared by the Company is 6.50%, but will never be less than 1.00%. The guaranteed floor is 1.00%. This Indexed Account contains the following Indexed Account NGEs: Index Growth Cap, Account Value Enhancement Rate.

Fixed Account

The Fixed Account earns interest on a daily basis, at a rate guaranteed to be no less than 1.00% annually. The rate currently credited by the Company to the Fixed Account is 2.00%. This rate is not guaranteed.

Dollar Cost Averaging (DCA) Account

Premiums may be directed to an optional DCA Account from which a portion is then systematically transferred on a monthly basis. Because the S&P 500 Index can vary considerably from month to month, the DCA Account may help smooth out the impact of market fluctuations. On each Monthly Allocation Date, an amount equal to one twelfth (1/12) of the premiums allocated to the DCA Account within the last 12-month period plus any interest credited since the last Monthly Allocation Date is transferred to the Holding Account for monthly allocation processing. The DCA Account earns interest on a daily basis, at a rate guaranteed to be no less than 1.00% annually. The rate currently credited by the Company to the DCA Account is 3.00%. This rate is not guaranteed. For premiums other than 1035 exchanges, the DCA Account is only available with annual and semi-annual payment modes and requires a minimum premium amount of \$1,000.

Holding Account

The Holding Account temporarily holds funds intended for account allocations until the next Monthly Allocation Date. Holding Account Value includes premiums (including any portion from the DCA Account being systematically transferred) and funds available for transfer such as maturing indexed account segments. The Holding Account earns interest on a daily basis, at a rate guaranteed to be no less than 1.00% annually. The rate currently credited by the Company to the Holding Account is 2.00%. This rate is not guaranteed.

Industry Standard Indexed Account

In order to provide a uniform way to compare indexed account performance between different Indexed UL products, an Industry Standard Indexed Account is established for each product using a consistent method. This Standard Indexed Account is a 1 year point to point capped indexed account with defined parameters. A maximum illustrated rate is then determined for each indexed account using the applicable Standard Indexed Account based on:

- A historical period of S&P® Index Returns (excluding dividends) dating back 66 years from the current calendar year
- Applying the current cap, 100% participation rate and 0% floor for the product's account that matches the defined parameters
- Calculating the average of all 25-year lookback periods starting on every trading day through this time period.

Lincoln WealthAccumulate® IUL (2019)

Understanding Your Inforce Illustration

For: DINA FALMAGNE
Age: 57
Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit: \$24,000,000
Initial Death Benefit Opt: Increasing by Cash Value
Initial Payment Mode: Annual
Riders: ABR

For accounts in this product that have a different participation rate or floor, the maximum illustrated rate may be further limited based on a historical calculation using the same methodology and applying the current cap, guaranteed participation and guaranteed floor for those accounts.

Using this Standard Indexed Account for each account within this product, the table below shows the resulting maximum illustrated rate for each account as well as the lowest and highest annualized crediting rate that would have occurred over all 25-year lookback periods during this 66 year period.

	Conserve Indexed Account	Balance Indexed Account	Perform Indexed Account	Perform Plus Indexed Account
Product Maximum Illustrated Rate*	4.84%	4.57%	4.87%	5.83%
Lowest Annualized Credited Rate*	3.49%	3.34%	3.51%	4.05%
Highest Annualized Credited Rate*	6.10%	5.78%	6.14%	7.21%

*Rate does not include any applicable Asset Based Charges or Interest Bonuses. All illustrated Policy values reflect the addition of any applicable Charges and/or Bonuses. See Interest Accumulation Detail Report for more information.

Method of calculating segment value used for indexed interest crediting

To give credit to segment balances that may vary over the duration of the 12 month segment period due to monthly deductions, withdrawals or fixed loans, the average monthly segment balance is used for indexed interest crediting calculations. The segment value is recorded on the 14th of each month, and the total is divided by 12 to determine the average monthly segment balance that will be credited with the index growth rate.

Any segment that does not have value at its maturity will still receive indexed credit based on the average monthly segment balance and interest crediting will be applied to the Fixed Account.

Allocations

Premiums other than 1035 exchange:

Holding Account 100% DCA Account 0%

1035 exchange premium:

Holding Account 100% DCA Account 0%

Premium Allocations determine how premiums are allocated between the Holding Account and the DCA Account. This illustration assumes the Premium Allocations shown above. If there is a DCA Account allocation but the resulting premium amount is less than the \$1,000 minimum, the premium will be allocated to the Holding Account.

Account Allocation Instructions:

Account	Premiums and DCA Transfers	Maturing Indexed Account Segments
Perform Plus Indexed Account	100.00%	100.00%
Perform Indexed Account	0%	0%
Balance Indexed Account	0%	0%
Conserve Indexed Account	0%	0%
Fixed Account	0%	0%

Account Allocations determine how the Holding Account value will be allocated between the Indexed Account(s) and the Fixed Account. Maturing Indexed Segment Allocations determine how the maturing indexed segment value will be allocated between the Indexed Account(s) and the Fixed Account. Any maturing index segment values use the same indexed account weighted interest rate as used for premium and DCA transfers. This illustration assumes the Account Allocations shown above.

Allocation Dates:

Allocation dates are the dates on which transfers from the Holding Account occur. The Initial Allocation Date is the 15th day of the calendar month following the date we process payment of your initial premium. Once allocations begin, the Monthly Allocation Date is the 15th day of each calendar month thereafter. **This illustration assumes the Initial Allocation Date occurs the same day as we process payment of your initial premium.** If the actual timing differs from what is illustrated, the ending values will most likely be different than shown in this illustration.

Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit: \$24,000,000
Initial Death Benefit Opt: Increasing by Cash Value
Initial Payment Mode: Annual
Riders: ABR

Assumed Illustration Rate:

This illustration uses a weighted rate to represent interest crediting based on an assumed S&P 500 rate of return for each account and the Account Allocations shown below. This rate does not include any applicable Interest Bonuses or Asset Based Charge. All illustrated Policy Values within this illustration reflect the addition of any applicable Asset Based Charge and Interest Bonus. See the Interest Accumulation Detail Report for more information.

Account	Allocation	Assumed Interest
Perform Plus Indexed Account	100.00%	5.83%
Perform Indexed Account	0%	N/A
Balance Indexed Account	0%	N/A
Conserve Indexed Account	0%	N/A
Fixed Account	0%	N/A

Interest Bonuses

There are three interest bonuses that may be applied depending on the account selected:

Index Credit Enhancement (ICE):

Beginning in year 1, the Index Credit Enhancement applies a percentage increase to the performance-based crediting percentages at segment maturity.

Account	Guaranteed Minimum Rate
Perform Plus Indexed Account	56.00%
Perform Indexed Account	56.00%
Balance Indexed Account	55.00%
Conserve Indexed Account	N/A

Positive Performance Credit (PPC):

The PPC is a non-guaranteed bonus that is available on the Perform Plus and Perform Indexed Accounts. Beginning in year 2, a PPC (variable multiplier) will be added to the ICE (multiplier) when:

1. There is a matured segment that recorded positive growth, and
2. A new segment of the same account type is then opened, which also records positive growth at segment maturity. During this segment's index credit calculation, the PPC is added to ICE.

What influences the PPC?

There are 3 components that influence the PPC:

- 1) **The maximum of the current Positive Performance Range (PPR) Declared by the Company** for each account at the beginning of the initial segment year, and once declared will not change. The "maximum" is the upper end of the PPR.

Account	Non-Guaranteed Positive Performance Range
Perform Plus Indexed Account	0 - 136.11%
Perform Indexed Account	0 - 103.67%
Balance Indexed Account	N/A
Conserve Indexed Account	N/A
Fixed Account	N/A

- 2) **Index Return Ratio** Calculated based on last year's index return compared to the current cap declared by the Company for each account at the beginning of the initial segment year.

Lincoln WealthAccumulate® IUL (2019)

A Life Insurance Illustration
Flexible Premium Adjustable Life Insurance

Understanding Your Inforce Illustration

For: DINA FALMAGNE
Age: 57
Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit: \$24,000,000
Initial Death Benefit Opt: Increasing by Cash Value
Initial Payment Mode: Annual
Riders: ABR

3) The Segment Value Ratio Year over-year change in the starting segment value.

These components are then used to calculate the PPC:

Hypothetical Example: The following hypothetical example demonstrates how this calculation works and is not representative of the assumptions used in this illustration.

Example assumptions:

- Perform Indexed Account
- Last Year's maximum declared PPR: 103.67%
- Last Year's declared Cap: 7.25%
- Assumed Weighted Interest Rate return: 4.87%
- Beginning Segment Value in Perform Account in year 1: \$100,000
- Beginning Segment Value in Perform Account in year 2: \$200,000

The PPC (variable multiplier) is added to the ICE (multiplier) to determine the total multiplier:

ICE	+	PPC	=	Total Multiplier
56.00%	+	34.82%	=	90.82%

Account Value Enhancement (AVE):

Beginning in year 1, a bonus is added to applicable accounts.

Account	Guaranteed Minimum Rate	When Applied
Fixed Account, Holding Account, DCA Account	0.35%	Credited monthly to the balance of each account on the Monthly Anniversary Day
Perform Plus Indexed Account	N/A	N/A
Perform Indexed Account	N/A	N/A
Balance Indexed Account	N/A	N/A
Conserve Indexed Account	0.35%	Credited at Segment Maturity based on Average Monthly Segment Balance

Understanding the Mechanics

Lincoln WealthAccumulate® IUL (2019)

A Life Insurance Illustration
Flexible Premium Adjustable Life Insurance

Presented by: Lincoln Financial Group- CPW

Understanding Your Inforce Illustration

For: DINA FALMAGNE
Age: 57
Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit: \$24,000,000
Initial Death Benefit Opt: Increasing by Cash Value
Initial Payment Mode: Annual
Riders: ABR

The Policy Value is the total of the Indexed Account(s), Fixed Account, DCA Account, Holding Account and any Fixed Loan Collateral Account value.

We deduct a premium load from each premium paid and then add the balance to the DCA Account and/or Holding Account according to Premium Allocation Instructions.

Funds available for transfer such as maturing segment(s) and any eligible portion of DCA Account value also flow through the Holding Account. Then, on each Monthly Allocation Date, amounts are transferred according to Account Allocation Instructions.

If account allocations include any account(s) with an Asset Based Charge (ABC), there is a one-time asset based percentage charge deducted when each 12-month segment is created. The ABC percentage for each Indexed Account can be found on the Indexed Accounts Summary Page of this illustration.

Monthly Deductions are made every month until the insured's attained age 121, regardless of whether or not premiums are paid. These include cost of insurance and administrative charges as well as the cost of any additional benefits or riders. Information on these charges can be found within your policy. All deductions, including Monthly Deductions and Withdrawals, are taken from the Fixed Account until it is exhausted, then in successive order from the Holding Account, DCA Account, and the most recently opened Indexed Segment(s). Any deductions that deplete an Indexed Segment will result in a reduced average monthly segment balance at Segment Maturity.

We credit interest to the difference remaining in the Holding Account, DCA Account, Fixed Account and any Fixed Loan Collateral Account. Indexed Account(s) interest is credited on the Segment Maturity Date based on the average monthly segment balance. Any applicable Index Credit Enhancement or Account Value Enhancement are also applied.

Surrender and Loan Information

Loans

There are two loan options available. Only one option can be chosen for all loans at any one time. You may switch between loan options no more than once per policy year and only after twelve months have elapsed from the date of the most recent loan.

Participating Loan: Debt remains in the Fixed Account and/or Indexed Account(s) and all funds continue to earn the same credited interest. The credited rate will never be less than the floor of the account(s) allocated to up to the Insured's attained age 121, and 3.00% thereafter. The Participating Loan interest charged is guaranteed at 5.50% through the Insured's attained Age 121, and 3.00% thereafter.

Since the Fixed Account and/or Indexed Account(s) continue to be credited interest, it is possible for the credited rates to be more or less than the guaranteed loan charged rate. In order to lessen the possibility that illustrated values would not be attained, **this illustration assumes that the illustrated interest rate applied to participating loan debt prior to any interest rate bonus is no more than 1% greater than the guaranteed loan interest charged, regardless of the assumed credited interest rate shown.** Actual interest credited to your policy will not be limited by these parameters, and participating loan debt will earn the same credited interest as unloaned values.

Fixed Loan: Debt is transferred from the Fixed Account and, if necessary, in successive order from the Holding Account, DCA Account, and the most recently opened Indexed Segment(s) to the Collateral Account. The Fixed Loan interest charged is guaranteed at 4.00% through policy year 10 and 3.00% thereafter. The interest rate credited to the Collateral Account is guaranteed at 3.00% in all years. Loan repayments may allow Collateral Account funds to move back into the Fixed Account. To move these funds into an Indexed Account, an Owner request is required.

For both loan options, interest charged accrues on a daily basis from the date of the loan and is compounded annually. Unpaid interest at policy anniversary is added to and becomes part of the loan principal. Loans reduce both surrender value and death benefit. Values in the illustration assume loan interest is not capitalized until the first day of the following year so the values are not net of loan interest accrued during the current year.

If a Participating Loan is switched to a Fixed Loan, Debt is transferred from the Fixed Account and, if necessary, in successive order from the Holding Account, DCA Account, and the most recently opened Indexed Segment(s) to the Collateral Account. If a Fixed Loan is switched to a Participating Loan, the Collateral Account value will be transferred to the Holding Account, and will be included in the next scheduled allocation.

Partial Surrenders (Withdrawals)

You may withdraw part of your surrender value at any time. The minimum partial surrender is \$500. The withdrawal will reduce the surrender value and death benefit by the same amount and may reduce the specified amount. A surrender charge will apply if this occurs. Any withdrawals that reduce an index segment's value will receive partial credit of the average monthly segment balance at segment maturity.

Glossary of Terms

Policy Value

The sum of the Indexed Account(s), Fixed Account, DCA Account, Holding Account and any Fixed Loan Collateral Account value.

Surrender Value

The policy value less surrender charges and loans.

Guaranteed Values

Guaranteed values are calculated using a guaranteed interest rate and charges. Regardless of account allocation, this basis will show the lowest floor available of 0% and a 6% Asset Based Charge in all years. Actual results may be more or less favorable due to the timing of premiums and policy changes.

Current Values

Current values are calculated using interest rate and charges in effect at the time the policy is put in force and an assumed Indexed Account rate of return and reflect the addition of any applicable Asset Based Charges and Interest Bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charges.

Midpoint Values

Midpoint values are calculated using an average of current and guaranteed interest and charges and reflect the addition of any applicable Asset Based Charges and Interest Bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charges.

Guaranteed Interest / Current Charges

Values are calculated using a guaranteed interest rate and the non-guaranteed charges that are in effect at the time the policy is put in force. This basis takes into account the allocation between indexed accounts and will apply a weighted floor and appropriate pro-rated asset based charge if applicable. Values also reflect the addition of any applicable Interest Bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charge.

Illustrated Riders

Accelerated Death Benefit (ABR)

This rider pays a portion of the death benefit if the insured becomes terminally ill or becomes confined to a nursing home. The maximum amount available on all policies with an accelerated benefits rider in force with The Lincoln National Life Insurance Company is \$250,000. Some provisions of this rider may not be applicable in your state. Please refer to the Accelerated Benefit Rider Disclosure for details. No additional premium is charged for this rider however there is a charge at the time of acceleration, which is deducted from the benefit payable.

Flexible Premium Adjustable Life Insurance

Indexed Accounts Summary

Lincoln WealthAccumulate® IUL (2019) offers four indexed account options to help meet your goals based on balancing potential index crediting with downside protection. It is important to understand the tradeoffs and features offered with each account when deciding on which account(s) to choose.

Start by selecting the account option (or options) that best suits your needs today, knowing you can shift as your priorities do.

Here is a summary of each account's features:

	Perform Plus ¹ If you prioritize highest return potential over downside protection	Perform ² If you want high return potential but with more downside protection	Balance ³ If you want a balanced approach to return potential and downside protection	Conserve ⁴ If you prioritize guaranteed features above return potential
CREDITING RATE RETURN	HIGHEST	HIGH	MEDIUM	LOWEST
Current Cap	9.00% (1%) guaranteed	7.25% (1%) guaranteed	6.75% (1%) guaranteed	6.50% (1%) guaranteed
Guaranteed Floor	0%	0%	0%	1%
Guaranteed Participation Rate	100%	100%	100%	100%
Interest Bonuses Guaranteed Minimum Bonuses	56% guaranteed Index Credit Enhancement (ICE)	56% guaranteed Index Credit Enhancement (ICE)	55% guaranteed Index Credit Enhancement (ICE)	0.35% guaranteed Account Value Enhancement (AVE)
Current Positive Performance Range*	0 - 136.11%	0 - 103.67%	N/A	N/A
Additional Charge	Yes	Yes	Yes	No
Guaranteed Maximum Asset Based Charge Deducted at the beginning of each 12-month segment	6%	4%	2%	None

Perform Plus Indexed Account Overview

Index: S&P 500

Segment Duration: 1 Year

Minimum Guaranteed Interest Rate: 0%

Guaranteed Participation Rate: 100.00%

Index Growth Cap: Current = 9.00%; Guaranteed Minimum = 1.00%

Index Credit Enhancement Rate: Current = 56.00%; Guaranteed: 56.00%

Positive Performance Range: Current = 0 - 136.11%

Asset Based Charge: Current = 6.00%; Guaranteed: 6.00%

The **Perform Plus Indexed Account:** Earns the full PTP percentage increase of the S&P 500 Index up to a cap declared at the beginning of the segment year, plus an Index Credit Enhancement (ICE) declared at the beginning of the segment year. Beginning in year 2, if applicable, a Positive Performance Credit (PPC) is added to the Index Credit Enhancement at segment maturity. The PPC is a non-guaranteed bonus. There is a one-time Asset Based Charge deducted when each 12-month segment is created.

Interest Crediting Example: To help you understand the impact of Index performance on this account's growth rate, this example shows how an indexed segment would have performed if the segment was created January 1st of each year shown, assuming a 9.00% cap, a guaranteed 100.00% participation rate and a guaranteed 0% floor. Adjusted Index Growth Rate is shown excluding a 56.00% ICE and any applicable PPC.

Year	Beginning Index Value	Ending Index Value	Index Growth Rate	Adjusted Index Growth Rate*
2006	1248.29	1418.30	13.62%	9.00%
2007	1418.30	1468.36	3.53%	3.53%
2008	1468.36	903.25	-38.49%	0%

2022	4766.18	3839.50	-19.44%	0%
2023	3839.50	4769.83	24.23%	9.00%
2024	4769.83	5881.63	23.31%	9.00%
2025	5881.63	6845.50	16.39%	9.00%

*Policy and account charges remain in effect and could reduce your policy value. Adjusted Index Growth Rate does not include any applicable Asset Based Charges or Interest Bonuses.

The interest crediting example is for illustrative purposes only, since this product was not available during the entire period. Actual caps would have been different over the different time periods and varied from time to time within those periods. The rates are an indication of S&P 500 Index changes in the past, have no bearing on future changes in the S&P 500 Index, and are not guaranteed. Actual results may be better or worse than shown.

(1) Key: (A) Annual
An "@" next to the Annual Premium Outlay column indicates, depending on actual results, that premium outlays may be required to be resumed or increased to keep the policy in force.
Assumed interest rate of 5.83% based on Weighted Allocations does not include any applicable Asset Based Charges or Interest Bonuses. All illustrated policy values reflect the addition of any applicable Charges and/or Bonuses. See the Assumed illustration Rate section of Understanding Your Illustration and the Interest Accumulation Detail Report for more information.

(1) The Policy Values are shown net of withdrawals and reflect the addition of any applicable Asset Based Charges and Interest Bonuses. See Interest Accumulation Detail Report for more information.

To calculate the End of Year Surrender Value, use the following equation: Premium - Premium Load - Expense and Admin. Charge - Current Cost of Ins - Rider Cost - Asset Based Charge + Interest Accumulation - Withdrawals + prior year's Policy Value - Loans - Surrender Charges = Surrender Value.

This report shows how the interplay of interest crediting and policy expenses could affect the policy cash and surrender values. Illustrated values are based on the credited rate, charges and expenses assumed in the Current Values; they are not guaranteed. An illustration must accompany this report. **The Lincoln National Life Insurance Company makes no representations beyond those contained in the illustration.**

(1) The Policy Values are shown net of withdrawals and reflect the addition of any applicable Asset Based Charges and Interest Bonuses. See Interest Accumulation Detail Report for more information.

To calculate the End of Year Surrender Value, use the following equation: Premium - Premium Load - Expense and Admin. Charge - Current Cost of Ins - Rider Cost - Asset Based Charge + Interest Accumulation - Withdrawals + prior year's Policy Value - Loans - Surrender Charges = Surrender Value.

This report shows how the interplay of interest crediting and policy expenses could affect the policy cash and surrender values. Illustrated values are based on the credited rate, charges and expenses assumed in the Current Values; they are not guaranteed. An illustration must accompany this report. **The Lincoln National Life Insurance Company makes no representations beyond those contained in the illustration.**

(1) Key: (A) Annual

An "@" next to the Annual Premium Outlay column indicates, depending on actual results, that premium outlays may be required to be resumed or increased to keep the policy in force.

Guaranteed interest rate of 0% based on Weighted Allocations described in the Understanding Your Illustration section. Guaranteed Interest rate does not include any applicable Asset Based Charges or Interest Bonuses. All illustrated Policy values reflect the addition of any applicable Charges and/or Bonuses.

Note: Values shown in this section are not guaranteed. For guaranteed values, please reference the Guaranteed Values section of this illustration.

Surrender Charges

For:	DINA FALMAGNE	Initial Death Benefit:	\$24,000,000
Age:	57	Initial Death Benefit Opt:	Increasing by Cash Value
Sex:	Female	Initial Payment Mode:	Annual
Class:	Preferred Non-Tobacco	Riders:	ABR

Surrender Charges

During the surrender charge period, there will be a charge in the event that the policy is fully surrendered.

If there is an increase in the specified amount, additional surrender charges may be in effect for the increase and, if so, a new schedule of surrender charges will be provided after such increase.

The surrender charges for this illustration shall be the lesser of the amounts listed below or the then current policy value.

Surrender values shown in the Summary, Guaranteed and Current Values sections reflect the following surrender charges:

Year	Surrender Charge
1	981,120.00
2	954,480.00
3	927,600.00
4	900,720.00
5	873,600.00
6	691,200.00
7	501,840.00
8	323,520.00
9	156,240.00
10	0

Presented by: Lincoln Financial Group- CPW

Transaction Summary

For:	DINA FALMAGNE	Initial Death Benefit:	\$24,000,000
Age:	57	Initial Death Benefit Opt:	Increasing by Cash Value
Sex:	Female	Initial Payment Mode:	Annual
Class:	Preferred Non-Tobacco	Riders:	ABR

This Transaction Summary is to help you understand the timing and amount of policy changes and premiums assumed in this illustration. If the actual timing and/or amount of any transaction differs from what is illustrated, the ending values and benefit periods will be different than currently shown in this illustration. The summary lists transactions requested and processed using Current Values assumptions. Note that post-issue policy changes are not automatic and must be initiated by the Owner. Changes such as specified amount increases require additional underwriting and approval. Please note that the requested transactions may have been modified automatically in an effort to comply with contract and regulatory limitations. Premium changes do not provide any implied or guaranteed coverage or Policy Values and it is the responsibility of the owner to review annual statements to ensure the policy is funded as desired.

Year	Month	Illustrated Transactions	Details
6	1	Last premium received year and month	\$1,626,909.51
6	9	Death Benefit Option	Increasing by Cash Value
6	9	Specified Amount	\$24,000,000.00
6	9	Underwriting Class	Preferred Non-Tobacco
25	1	Death Benefit Option changed	Level
7	1	Scheduled Annual Premium	\$1,626,909.52
8	1	Scheduled Premium changed	\$0.00

Transaction Summary - Planned Inforce Changes

For:	DINA FALMAGNE	Initial Death Benefit:	\$24,000,000
Age:	57	Initial Death Benefit Opt:	Increasing by Cash Value
Sex:	Female	Initial Payment Mode:	Annual
Class:	Preferred Non-Tobacco	Riders:	ABR

This Transaction Summary - Planned Inforce Changes is to help you understand the timing and amount of policy changes and premiums assumed in this illustration. If the actual timing and/or amount of any transaction differs from what is illustrated, the ending values and benefit periods will be different than currently shown in this illustration. The summary lists transactions requested and processed using Current Values assumptions. Note that post-issue policy changes are not automatic and must be initiated by the Owner. Changes such as specified amount increases require additional underwriting and approval. Please note that the requested transactions may have been modified automatically in an effort to comply with contract and regulatory limitations. Scheduled premiums are considered ongoing unless otherwise indicated.

Scheduled Premium Changes

The following future scheduled premium changes correspond to the most recent instructions provided by the Owner. Scheduled premiums are considered ongoing unless otherwise indicated. These premium changes will not happen automatically. The Owner will receive a reminder notification of these changes by letter approximately 60 days prior to the policy anniversary date in the year the change is projected. These premium changes do not provide any implied or guaranteed coverage or policy values and it is the responsibility of the Owner to review annual statements to ensure the policy is funded as desired.

Year	Month	Payment Mode	Modal Premium Amount
8	1	Annual	\$0

Planned Policy Changes

The following future planned policy changes correspond to the most recent instructions provided by the Owner. Prior to the policy anniversary when the changes below are illustrated to occur, the Owner will receive a reminder notification describing the upcoming planned policy changes. Please note that these changes will not automatically take place without action from the Owner. It is important to evaluate policy performance at that time and request changes be made as appropriate or consider adjusting future planned transactions in order to continue to meet long term goals and objectives.

These changes do not provide any implied or guaranteed coverage or policy values and it is the responsibility of the Owner to review annual statements to ensure the policy is meeting the desired objectives.

Tax Information

Presented by: Lincoln Financial Group- CPW

For: DINA FALMAGNE
Age: 57
Sex: Female
Class: Preferred Non-Tobacco

Initial Death Benefit:	\$24,000,000
Initial Death Benefit Opt:	Increasing by Cash Value
Initial Payment Mode:	Annual
Riders:	ABR

Assumed Tax Bracket: 28.00%

1035 Exchange: Gross Cash Value Amount - \$0

Cost Basis: \$9,761,457.07

This illustration assumes a tax advantaged 1035 transaction. Please consult a professional tax advisor: e.g., attorney or accountant for further information.

Modified Endowment Contract Testing:

TAMRA Seven-Pay Premium: \$1,626,909.52

This presentation under current tax code interpretation using the Current Values will not become a Modified Endowment Contract. Please consult a professional tax advisor: e.g., attorney or accountant for further information.

The following payments were used in MEC testing: Year 1: \$1,626,909.52, Year 2: \$1,626,909.51, Year 3: \$1,626,909.51, Year 4: \$1,626,909.51, Year 5: \$1,626,909.51, Year 6: \$1,626,909.51. These payments are net of withdrawals and assumed to be paid from August, 2020 (date of last material change to your policy), to the current date of your inforce illustration. Actual results will depend on the timing of your premium payments and withdrawals.

Definition of Life Insurance

You have selected the Cash Value Accumulation Test for this policy. This selection must be made when you complete your application and cannot be changed.

Lincoln Financial Group® affiliates, their distributors, and their respective employees, representatives and/or insurance agents do not provide tax, accounting or legal advice. Clients should consult their own independent advisor as to any tax, accounting or legal statements made herein.
